Airborne altitude researchers report on the Mountain Wave Project

In order to study the causes and development of turbulence and air vortexes that represent such a danger to aircraft in the vicinity of mountains the German pilots and scientists taking part in the Mountain Wave project have had to take off from high altitudes in Argentina. Under the slogan "In the realm of the wild winds" the project director René Heise, world gliding champion Klaus Ohlmann and meteorologist Professor Jörg Hacker report on "setting new records, the research mission and their adventures on the fringes of the stratosphere" during their record-breaking flights, obtaining readings with their high performance Stemme S10 motor glider, altitude research in a Grob Egrett, studying Mars from the Earth's atmosphere, and the excitement of flying where the air is thin, in a combination of scientific enquiry and extreme sport. This event will be presented by Dr. Wolf-Dietrich Herold on Saturday, 31 May, at 2 p.m. at the ILA Conference Centre, Hall 4, Lima Room.
